**RED LIGHT**

Stimulates production of collagen and elastin—Red light is absorbed by mitochondria and stimulates ATP increasing cellular action, enhancing its activity.

EQUINOX LIGHT PHOTOBIO-MODULATION INFORMED CONSENT

The primary reason for your treatment is the improvement of Dry Eye signs and symptoms. Low level light photobiomodulation (PBM) is the emission of LED light at a particular wavelength that triggers endogenous heating of the eyelids. This treatment facilitates production and stimulation of the oil component released from the meibomian glands into the tear film, thus stabilizing the lipid layer of the tears, and reducing the signs and symptoms of Dry Eye Disease.

Informed Consent:

I understand that I should not have this application in the following cases:

1. Pregnancy
2. Epilepsy
3. In the presence of metallic piercing on the treated area

Warnings include: the use of photosensitizing drugs such as anti-inflammatories, anti-coagulants, tetracyclines. Please notify your doctor

Before the procedure:

1. Be sure your eyelids are clean and free of any lotions
2. Do not apply eye make-up
3. Do not wear contact lenses

During the procedure:

1. The procedure takes 15 minutes while your eyes are closed
2. The light will be bright for about 30 seconds, and then your eyes will adapt to the stimulation.
3. You will notice a warm feeling during the treatment but there is no pain or discomfort

After the procedure:

1. You may be schedule for a follow-up visit
2. There is minimal down time. Your skin may be sensitive. Avoid long-term sun exposure, harsh face cleaning products such as exfoliators, strong acids and retinoids for 24-48 hours.

By signing below, I am confirming that I do not have any of the above conditions and understand the potential adverse events that may occur and am voluntarily agreeing to having my Equinox Low Level Light Therapy (Photobiomodulation)
